STAGE 1: EMPATHIZE - 5W1H

Who will view this Dashboard?	What problem does this Dashboard solve?	When and where will stakeholders view this Dashboard?	Why do stakeholders need this Dashboard?	How will stakeholders make decision based on this Dashboard
F&B Investors and Restaurant Entrepreneurs Restaurant General Managers Marketing Leads	Choosing the wrong city based on surface numbers instead of actual customer sentiment Lacking a clear understanding why overall ratings are dropping or stalling Assuming customers will only spend within their budget	When? • Pre-investment • Quarterly/Monthly Strategy Reviews • Operational Check-ins Where? • At the office, during meetings • While on business trip	**De-Risking New Ventures:** Opening a restaurant carries high upfront capital costs and thin margins; having verifiable consumer feedback significantly lowers the risk of expanding into the wrong market. **Targeted Budgeting:** Instead of spreading improvement budgets across interior decor, kitchen upgrades, and staff hires all at once, decision-makers need clarity on which operational levers actually move customer ratings the most. **Spotting Unmet Market Demand:** It enables planners to find markets where diners are enthusiastic but underserved, rather than blindly entering crowded or unreceptive areas.	**1 - Evaluate Regional Viability:** Compare customer volume against satisfaction levels across states to shortlist promising expansion targets and flag regions that require deeper ground research. **2 - Define Concept & Price Point:** Contrast customer demographic budgets against actual ratings across price tiers, deciding whether to position as a budget, mid-scale, or premium concept. **3 - Prioritize Operational Levers:** Compare component ratings (Food vs. Service vs. Overall) alongside venue attributes (seating style, smoking policies, parking) to decide where operational training and capital improvements should focus first. **4 - Tailor Target Offerings:** Review dominant consumer lifestyles (commuting methods, social habits, preferred cuisines) to shape store location choices, operating hours, and menu variety.
If only one key stakeholder is chosen, who would it be?	**Summarize the problem in one sentence**			
F&B Investors and Restaurant Entrepreneurs	It helps restaurant investors and operators replace intuition with data by diagnosing where to expand, how to price concepts, and which operational areas directly drive diner satisfaction.			

STAGE 1: EMPATHY MAP

<table>
<tr><th>What does the stakeholder think and feel?</th><th>What does the stakeholder see?</th><th>What does the stakeholder say and do?</th></tr>
<tr><td>Thinking:
Thinks about which city gives the next location the highest chances of success
"Should we bet on a mid-tier concept for volume, or a premium model for healthier margins?"
"When review scores slip, is the kitchen to blame, or is it the service?"
Feeling:
Worries about signing a multi-year lease in the wrong market
Frustrated that existing survey spreadsheets do not clearly link customer background, location traits, and satisfaction drivers together</td><td>Disconnected spreadsheets across restaurants, consumer demographic surveys, and raw rating metrics (Overall, Food, Service)
Competitors expanding rapidly, yet seeing wild variations in customer review scores across different cities.
Internal summaries that mostly report simple restaurant counts per state rather than measuring how diners actually feel.</td><td>"I need to know where diners are genuinely receptive, not just where the most restaurants happen to be."
"Don't just give me an overall average, show me whether complaints are coming from the food, the service, or the environment."</td></tr>
<tr><th colspan="2">What are the biggest problems and challenges?</th><th>What are the opportunities and benefits?</th></tr>
<tr><td colspan="2">Location Blindness: Risk of pouring capital into crowded cities where diner sentiment is poor, or overlooking quieter areas with strong unmet demand.
Misguided Fixes: When ratings drop, operators often guess at the solution (reworking menus, swapping chefs, costly remodels) without knowing what actually triggered the low score.
Pricing Guesswork: Lack of clarity on whether diners who describe themselves as budget-conscious will still spend more for an elevated experience.</td><td>De-Risked Expansion: Picking the right geographic target upfront, significantly reducing the risk of a costly site closure.
A Proven Concept Blueprint: Identifying the shared traits of top-performing venues (service standards, seating layout, parking, amenities) to replicate in new locations.
Targeted Capital Deployment: Saving money by directing operational and training budgets straight to the biggest friction points in the guest journey.</td></tr>
</table>

STAGE 2: DEFINE POVS & NORTHSTAR METRICS

NORTHSTAR 1	NORTHSTAR 2
What value do you want to measure?	**What value do you want to measure?**
Average Overall Rating	Food-to-Service Deficit
When does the value deliver success?	**When does the value deliver success?**
If the Average Overall Rating of a Restaurant is higher than the industry average	The deficit value approaching zero
Northstar Metric name	**Northstar Metric name**
Averall Overall Rating	Food-to-Service Deficit
Why do you choose this metric?	**Why do you choose this metric?**
• For an F&B investor, every strategic decision is made with the sole purpose of maximizing customer satisfaction and retention • racking AOR provides a holistic view of the investment's health.	• Reveals insight: whether customer dissatisfaction comes from the Food or the Service • Tells investors where to spend money

Brainstorming POVs	POV 1	POV 2	POV 3
	Overview	**Customers**	**Restaurants**

POV	Description	Why
POV 1	Overall Performance	Evaluate overall performance of the Mexican F&B market
POV 2	Average Overall Rating and Food-to-Service gap given by Customers	Identify exactly who drives top ratings
POV 3	Average Overall Rating and Food-to-Service gap given to Restaurants	Identify the exact combination of restaurant features that yield high scores

Northstar Formula	Average Overall Rating	Food-to-Service Deficit
POV 1 breakdown	• Number of Ratings • Number of Reviewed restaurants • Customer Count • % of Satisfied Customers	• Average Food Rating • Average Service Rating
POV 2 breakdown	Ratings across different features and cuisine preferences of customers	Ratings across different features and cuisine preferences of customers
POV 3 breakdown	Ratings across different features and cuisines of restaurants	Ratings across different features and cuisines of restaurants

STAGE 3: IDEATE - BRAINSTORMING

Start with:	Based on the chosen Northstar metrics, brainstorm breakdown dimensions and relevant insights from different perspectives							
Overview layer	**Metric 1**	**Metric 2**	**Metric 3**	**Metric 4**	**Metric 5**	**Metric 6**	**Metric 7**	**Metric 8**
	Average Overall Rating	Number of Ratings	Number of Reviewed Restaurants	Customer Count	% of Satisfied Customers	Average Food Rating	Average Service Rating	

Idea Name	Layer 0 dimension: aggregate metrics	Layer 1 dimension: metric breakdown by 1 dimension	Layer 2 dimension: metric breakdown by 2 dimensions	is there anything important we missed?
POV 1: Overview	• Average Overall Rating • Average Food Rating vs. Average Service Rating • Number of Ratings • Number of reviewed restaurants • Customer Count • % of Satisfied Customers	• by Geography: ◦ by State ◦ by City	• by Geography + Restaurant dimensions	x
POV 2: Customer Analysis	• Average Overall Rating • Average Food Rating vs. Average Service Rating • Customer Count • % of Satisfied Customers	• by Geography ◦ by State ◦ by City • by Customer dimensions	• by Geography + Customer Preference	x
POV 3: Restaurant Analysis	• Average Overall Rating • Average Food Rating vs. Average Service Rating • Number of Restaurants • % of High Quality Restaurants	• by Geography ◦ by State ◦ by City • by Restaurant dimensions	• by Geography + Restaurant Cuisines	x

STAGE 3: IDEATE - STRUCTURE IDEA

	Metric 1	Metric 2	Metric 3	Metric 4	Metric 5
Scorecard	Average Overall Rating	Customer Count	% Satisfied Customers	Number of Reviewed Restaurants	Number of Ratings

Idea Name	Very important information	Important information	Detailed information
POV 1: Overview	Average Overall Rating, Customer Count, % Satisfied Customers, Number of Reviewed Restaurnats, Number of Ratings	• The number of ratings for each Score • Food-to-Service deficit	• Breakdown by Geography to identify restaurants are performing well in which region • Breakdown by Restaurant dimensions
POV 2: Customer Analysis	Average Overall Rating, Average Food Rating, Average Service Rating, Customer Count, % of Satisfied Customers	• Breakdown by Geography • Breakdown by each Customer dimension	• Breakdown by Geography and Customer Preference to see Top 10 Customer Preference for each Rating category
POV 3: Restaurant Analysis	Average Overall Rating, Average Food Rating, Average Service Rating, Number of Restaurants, % of High Quality Restaurants	• Breakdown by Geography • Breakdown by each Restaurant dimension	• Breakdown by Geography and Restaurant Cuisine to see Top 10 Restaurant and Top 10 Restaurant Cuisine fo each Rating category
